Danish Ahmed Mohammed

Cloud and DevOps Engineer | AWS & Azure | Amazon EKS, AKS & ECS | Terraform

Toronto, ON | +1 (437) 662-0448 | danish.ahmedm7@gmail.com | linkedin.com/in/Danish-am

Professional Summary

Cloud and DevOps Engineer with 5+ years of experience across AWS and Azure, Infrastructure as Code, CI/CD and Kubernetes platforms (Amazon EKS, Azure Kubernetes Service and Amazon ECS). At Broadridge Financial Solutions, maintains shared Terraform and CloudFormation modules that application teams deploy through managed Jenkins pipelines across a multi-account AWS environment, strengthens security with least-privilege IAM and KMS controls, and supports secure AI workloads. Brings skills in AI tools, including Amazon Bedrock, Bedrock AgentCore, prompt engineering and RAG.

Technical Skills

- **Cloud Engineering (AWS):** EC2, VPC, IAM, S3, Lambda, CloudFormation, CloudWatch, CloudTrail, KMS, Auto Scaling, AWS Organizations, Transit Gateway, AWS PrivateLink, Route 53 DNS Firewall, AWS Backup, EC2 Image Builder, Amazon WorkSpaces, Amazon EMR, Amazon SageMaker, Amazon Bedrock (generative AI), multi-account architecture
- **Cloud Engineering (Azure):** Microsoft Azure, Azure DevOps (Pipelines, Repos, Boards), Azure Virtual Machines, Virtual Networks (VNet), Network Security Groups, Azure Load Balancer, Microsoft Entra ID, Azure RBAC, Storage Accounts, Azure Key Vault, Azure Monitor, Azure Policy, Azure Kubernetes Service (AKS), ARM templates
- **Containers and Orchestration:** Kubernetes, Amazon EKS, Azure Kubernetes Service (AKS), Amazon ECS, Docker, Amazon ECR, Azure Container Registry, Helm
- **AI Tools:** Amazon Bedrock, Amazon Bedrock AgentCore, prompt engineering, Retrieval-Augmented Generation (RAG)
- **Infrastructure as Code and Configuration:** Terraform, Terragrunt, AWS CloudFormation, Ansible, Ansible Tower, Chef, Cookiecutter templates, shared IaC modules
- **CI/CD and DevOps:** Jenkins, GitLab, Azure DevOps, Atlassian Bamboo, Git, Maven, CI/CD pipeline automation
- **Security and Governance:** cloud security remediation, IAM roles and policies, service-linked roles, guardrails, drift detection and remediation, new service approvals
- **Monitoring:** Amazon CloudWatch, Prometheus, New Relic
- **Scripting and OS:** Python, Bash, Red Hat Enterprise Linux (RHEL), Linux administration, Windows Server (EC2Launch v2)
- **Tools and Practices:** Jira, Confluence, production support, incident management, on-call

Work Experience

Broadridge Financial Solutions
Cloud and DevOps Engineer Oct 2025 – Present

- Write and maintain shared, versioned Terraform modules and Cookiecutter templates that application teams use to deploy to AWS and Azure through managed Jenkins pipelines, covering Auto Scaling Groups, shared load balancers, Jenkins agents, and Linux and Windows workloads.
- Manage multi-account, multi-environment AWS deployments through a centralized CloudFormation architecture repository, with daily automated jobs that detect and reset configuration drift to enforce security and compliance guardrails.
- Supported secure AI workloads by maintaining DNS Firewall allowlists and extending permissions and account configurations for AI-enabled environments, including Amazon SageMaker, EC2 Image Builder, KMS and S3.
- Support containerized workloads on Amazon EKS and Amazon ECS, helping application teams troubleshoot deployments, IAM roles for tasks and pods, load balancer integration and container images in Amazon ECR.
- Build and maintain Azure DevOps YAML pipelines for Terraform plan and apply, using service connections with managed identities, Azure Key Vault for secrets and approval gates before production deployments.
- Developed and maintained shared Terraform modules for Azure resources with built-in naming standards and input validation, helping application teams deploy consistently and catch configuration errors before deployment.
- Provision and manage Azure infrastructure with Terraform, including resource groups, Virtual Networks, Network Security Groups, Storage Accounts and Azure Key Vault, applying Azure RBAC and Entra ID for access control.
- Support application teams deploying to Azure, troubleshooting Terraform plans, Azure DevOps and Jenkins pipeline runs, identity permissions and network connectivity.
- Onboarded application repositories and projects into standardized GitLab, Jenkins and Terragrunt workflows, maintaining code-ownership configurations.
- Created reusable Terraform examples for Amazon S3 use cases, including browser uploads and downloads, data retention, hosted file transfer and archive retention.

- Evaluate and approve new AWS services for enterprise use, assessing security, IAM access controls and compliance requirements, and design new cloud solutions for application teams.
- Established AWS PrivateLink connectivity to Snowflake and implemented Amazon WorkSpaces service-linked roles across a multi-account environment.
- Troubleshot AWS Lambda permissions and Amazon S3 event notification configurations for application teams, restoring event-driven workflows across accounts.
- Produced and maintained platform documentation, change logs, IAM role documentation and implementation examples to improve adoption of shared services.

Tata Consultancy Services – Vanguard Investments
Cloud Platform Engineer Apr 2022 – Aug 2023

- Designed and implemented Terraform scripts to automate the provisioning and management of AWS EMR clusters, integrating CloudFormation to enhance automation, reducing manual configuration errors and improving scalability by 30%.
- Configured and optimized EMR clusters using Ansible playbooks for consistent, reliable deployments, automating 70% of previously manual effort.
- Automated CI/CD pipelines in Atlassian Bamboo and monitored EMR clusters in Amazon CloudWatch to resolve performance issues.
- Developed and implemented pull requests for table ingestion, enabling data replication from IBM Db2 to an AWS S3 data lake.
- Enhanced Python code in data pipelines for efficient data ingestion and processing, improving overall data quality.
- Wrote Bash scripts to automate recurring system administration and EMR maintenance tasks, reducing manual effort for the operations team.
- Managed version control and release workflows with Git, Atlassian Bamboo and Jira, including branching, pull request reviews and tracking deployment work.
- Managed incident response and troubleshooting for production systems, maintaining 99% uptime in collaboration with engineering teams.

Mphasis Limited
Linux DevOps Engineer Aug 2019 – Apr 2022

- Managed Red Hat Enterprise Linux servers for stability, security and performance, including system upgrades, security patching and decommissioning legacy servers.
- Deployed Ansible Tower for centralized infrastructure automation, significantly reducing manual configuration errors.
- Monitored Docker container health and performance to ensure optimal resource utilization and prompt issue resolution.
- Provided hands-on incident management support, diagnosing and resolving production issues and improving system reliability by 20%.
- Integrated New Relic and Prometheus monitoring to capture real-time performance metrics for proactive troubleshooting.

Education

Postgraduate Certificate in Data Analytics May 2024 – Dec 2024
Durham College, Oshawa, Ontario, Canada

Postgraduate Certificate in Cybersecurity Sep 2023 – Apr 2024
Durham College, Oshawa, Ontario, Canada

Bachelor of Technology in Electronics and Communications Engineering Aug 2015 – May 2019
JNTU Hyderabad, India

Certifications

- Microsoft Certified: DevOps Engineer Expert (AZ-400)
- HashiCorp Certified: Terraform Associate
- Microsoft Certified: Azure Administrator Associate (AZ-104)
- AWS Certified Solutions Architect – Associate
- Red Hat Certified System Administrator (RHCSA)
- GitHub Foundations
- Google IT Automation with Python Professional Certificate
- Google Foundations of Project Management
